Tests: SARS-COV-2 RT-PCR

Molecular Infectious Diseases

SARS-CoV-2

Not detected

SARS-CoV-2 nucleic acid was not detected by means of a real-time reverse transcriptase polymerase chain reaction (RT-PCR) test.

A "Not Detected" (Negative) test result for this test means that SARS-CoV-2 RNA was not present in the specimen. However, it does not exclude the possibility of COVID-19 and should not be used as the sole basis for patient management decisions.

A false-negative result can be due to several factors including inadequate specimen collection, sampling too early or late in the course of infection, and clinical severity of disease.

Repeat testing is recommended only if clinically indicated.

Lancet Laboratories is an ISO 15189 accredited laboratory recognised by the South African government for COVID testing. This laboratory result constitutes a certificate for travel purposes.
